

Instructions:

- Just so you know I've tried dozens of browser tools (such as OpenManus Playwright and more -- huge AI fees!) and hundreds of hours to find the right way to do this. I found a Chrome browser extension that can follow a Python script to OPEN a trade. MODIFY a trade. and CLOSE a trade. This way, no AI fees, nothing like that. All browser automated. This doesn't cost you anything !

This turns Mimic Trades into AUTOMATED Mimic Trades.

1- I run this on 2 x Chrome browsers. I tried edge and others, they don't seem to work good. Chrome works the best.

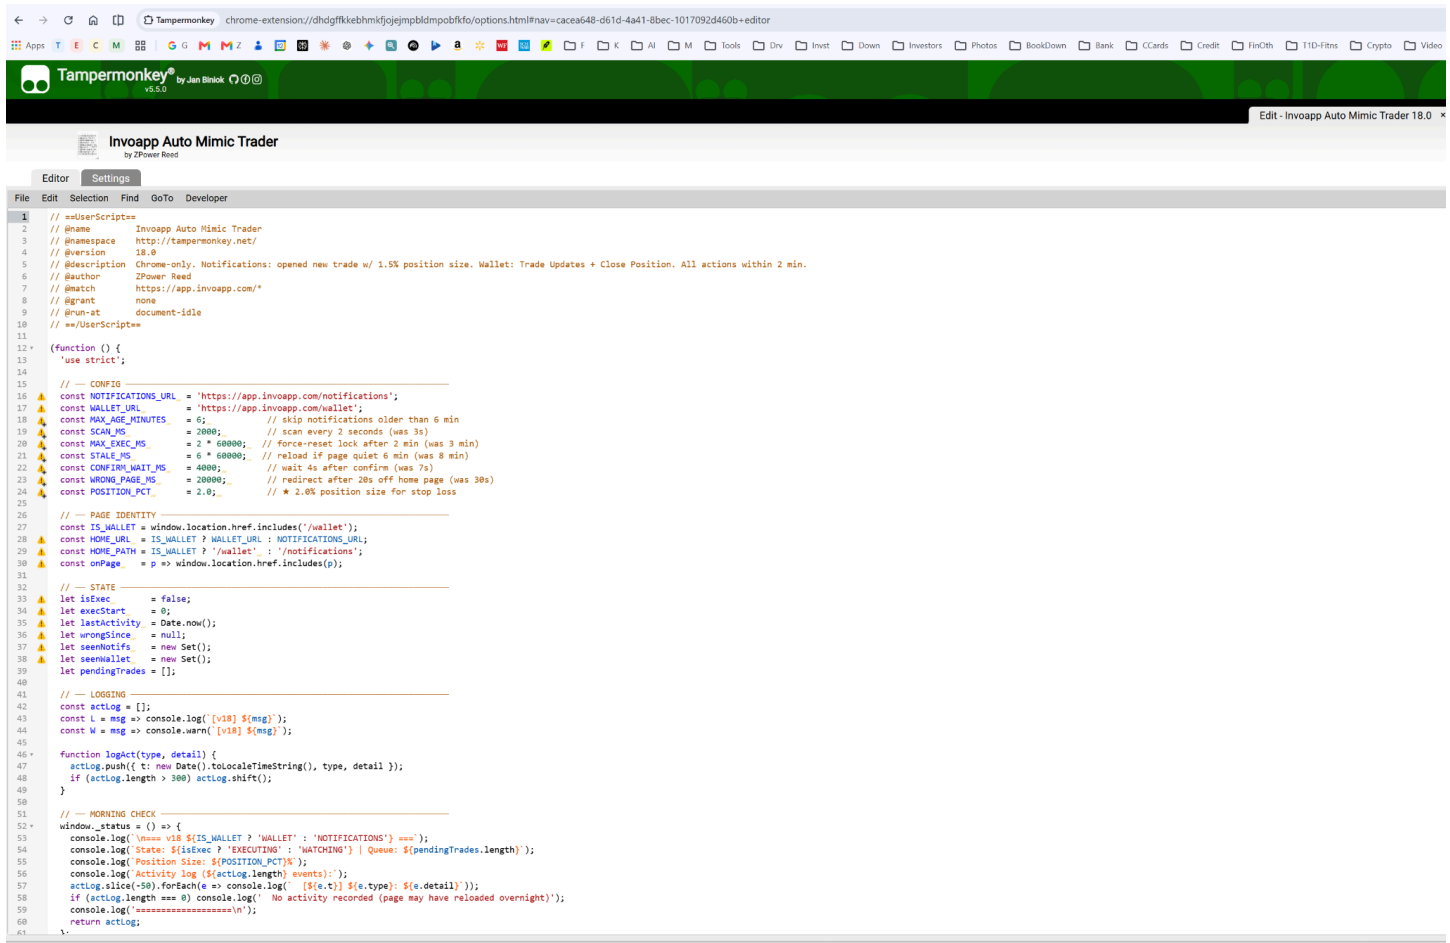

2- Install a Chrome extension called tampermonkey. This takes over the automation and keyboard controls for you.

<https://chromewebstore.google.com/detail/tampermonkey/dhdgffkkebhmkfjojejmpbldmpobfkfo>

<https://www.tampermonkey.net/>

Follow the instructions to activate and make tampermonkey active so it can control and click on browser links.

3- Upload the Javascript to Tampermonkey. I've gone through about 50 revisions of this. All updated and coded with Claude Code in Python script.
(see screenshot)

```
1 // ==UserScript==
2 // @name      Invoapp Auto Mimic Trader
3 // @namespace  http://tampermonkey.net/
4 // @version    18.0
5 // @description Chrome-only. Notifications: opened new trade w/ 1.5% position size. Wallet: Trade Updates + Close Position. All actions within 2 min.

49     }
50
51     // --- MORNING CHECK
52     window._status = () => {
53         console.log('===== v18 $IS_WALLET ? $WALLET : $NOTIFICATIONS$ ===');
54         console.log('State: $isExec ? $EXECUTING : $WATCHING$ | Queue: $pendingTrades.length$');
55         console.log('Position Size: $(POSITION_PCT)%');
56         console.log('Activity log $(actlog.length) events:');
57         actlog.slice(-50).forEach(e => console.log('  [$(e.t)] $(e.type) $(e.detail)'));
58         if (actlog.length === 0) console.log('  No activity recorded (page may have reloaded overnight)');
59         console.log('=====n');
60         return actlog;
61     }
```

The Javascript is in the TXT file attached.

4- You need 2 chrome browsers open for this to work. One for NEW ORDERS. The other for MODIFICATION and CLOSE orders.

Tab 1 app.invoapp.com/notifications Open new trades (mimic trade)

Tab 2 app.invoapp.com/wallet Trade Updates + Trader Closed

Pages are refreshed randomly, so the Invo system doesn't block you. Between 20 to 90 seconds if I remember right.

Expert Tip! Hit F5 to refresh the chrome browser after you upload the python script. That causes the Chrome browser to refresh the updated Tampermonkey code you uploaded.

I marked the ones in RED that tampermonkey got the signal and clicked MIMIC (usually within 20-30 seconds of the “opened new trade” being posted)

On the wallet page it does ALL the trade updates, including doing a default mimic of all the trader updates to that trade. And when the trader closes the Trade it closes it too. Usually within about 30-45 seconds.

5- You need to CHOSE YOUR TRADE PROFILES -- add them to your watch list in your Involio account. This will automate the Mimic. It should do everything for you. If you select a Trade Profile you don't want. DO NOT ADD IT to your Invo account (i.e., do not WATCH that trade profile). Good or bad, it will automate it.

I set a stop loss coded at 2%. I'm playing with this right now. Again I used Claude to update the Python script, add this to Claude (I use the free version) and it will understand exactly what is being done. And you can tweak and automate this as you see fit.

6- I run this 24-7 on my "trading windows PC". Even when the screen turns off, it is still running those 2 browsers. I don't put my windows PC to sleep. Please make sure the Chrome browser doesn't go to sleep or minimize. It always has to be active. Sorry, but this is the only way I've found to do this (until the API comes!)

Setup Windows PC running so it doesn't sleep
Go to **Settings** → **System** → **Power & Sleep**:

- Screen: "Turn off after" → your 2 hours is fine 
- Sleep: **Never** (plugged in)

Go to **Settings** → **Windows Update** → **Advanced Options** → **Active Hours**:

- Set to **6am–3am** — prevents forced restarts overnight

Go to **Task Manager** → **Startup Apps** — disable anything that could cause overnight reboots.

Chrome Browser sleeping

1. Disable Memory Saver (Built-in)

Chrome has an automatic feature that puts inactive tabs to sleep to save memory. You can completely disable this or whitelist your important tabs. [[1](#), [2](#)]

Method 1: Prevent Chrome from putting the site to sleep

Chrome has a built-in Memory Saver that automatically deactivates tabs. To stop it from affecting app.invoapp.com: [[1](#), [2](#)]

- Open Google Chrome.
- Click the three dots in the top-right corner and select Settings.
- Click on Performance in the left-hand menu.
- Locate the Always keep these sites active setting.
- Click the Add button, type in app.invoapp.com, and click Add. [[1](#), [2](#)]

7. Here are the complete settings changes you can modify in the Javascript

(I just use NOTEPAD to edit it, just like its a text or txt file)

All settings are at the very top of the script — change one value, save, reload tabs.

Complete Settings Reference Table

Setting	Constant to Edit	Default v18.5	Where Applied	How to Change
Position size cap	MAX_POSITION_PCT	4.0 (4%)	Notifications open + Wallet updates	Change 4.0 to any %
Stop loss	MANAGE_STOP_LOSS	false	Not touched anywhere	Set true to re-enable capping
Keepalive reload	RELOAD_MIN_S / RELOAD_MAX_S	15 / 45 sec	Both tabs	Change the two numbers
Max trade age	MAX_AGE_MINUTES	15 min	Notifications only	Increase if missing overnight trades
Scan frequency	SCAN_MS	2000 ms	Both tabs	Lower = faster detection
Post-action cooldown	POST_ACTION_COOL	5000 ms	Blocks reloads after any confirm	Raise if close still interrupted
Confirm wait (wallet)	CONFIRM_WAIT_MS	3000 ms	Close + Copy flows	Raise if Involio slow to process
Confirm wait (open)	OPEN_CONFIRM_MS	2000 ms	Notification open only	Keep fast
Stale page reload	STALE_MS	10 min	Both tabs	Raise for quieter overnight
Max execution lock	MAX_EXEC_MS	2 min	Force-reset if stuck	Rarely needs changing

All settings are at the **very top of the script** — change one value, save, reload tabs.

here are items adjustable in the Javascript code:

Setting	Constant to Edit	Default v18.5	Where Applied	How to Change
Position size cap	MAX_POSITION_PCT	4.0 (4%)	Notifications open + Wallet updates	Change 4.0 to any %

Stop loss	MANAGE_STOP_LOSS	false	Not touched anywhere	Set true to re-enable capping
Keepalive reload	RELOAD_MIN_S / RELOAD_MAX_S	15 / 45 sec	Both tabs	Change the two numbers
Max trade age	MAX_AGE_MINUTES	15 min	Notifications only	Increase if missing overnight trades
Scan frequency	SCAN_MS	2000 ms	Both tabs	Lower = faster detection
Post-action cooldown	POST_ACTION_COOL	5000 ms	Blocks reloads after any confirm	Raise if close still interrupted
Confirm wait (wallet)	CONFIRM_WAIT_MS	3000 ms	Close + Copy flows	Raise if Involio slow to process
Confirm wait (open)	OPEN_CONFIRM_MS	2000 ms	Notification open only	Keep fast
Stale page reload	STALE_MS	10 min	Both tabs	Raise for quieter overnight
Max execution lock	MAX_EXEC_MS	2 min	Force-reset if stuck	Rarely needs changing

All settings are at the very top of the script — change one value, save, reload tabs.
